the three basic questions of ebs are 1 what bio social psychological and cultural characteristics of human beings influence which characteristics of the built environment 2 what effects do which aspects of which environments have on which groups of people under what circumstances and when why and how and 3 given this two way interaction between people and environments there must be mechanisms that link them what are these mechanisms focusing on answers to these and other questions culture architecture and design discusses the relationship between culture the built environment and design by showing that the purpose of design is to create environments that suit users and is therefore user oriented design must also be based on knowledge of how people and environments interact thus design needs to respond to culture in discussing 1 the nature and role of environment behavior studies ebs 2 the types of environments 3 the importance of culture 4 preference choice and design 5 the nature of culture 6 the scale of culture and 7 how to make culture usable amos rapoport states that there needs to be a change from designing for one's own culture to understanding and designing for users cultures and basing design on research in ebs anthropology and other relevant fields such changes should transform architecture and design so that it in fact does what it claims to do and is supposed to do create better i.e. more supportive environments

in this collection of essays theorizing built form and culture the legacy of amos rapoport a felicitation volume to celebrate the significance of professor amos rapoport's lifelong scholarship scholars from around the world discuss the analytical relevance expansion and continuing application of these contributions in developing an advanced understanding of mutual relationships between people and built environments across cultures professor amos rapoport has espoused an intellectual and theoretical legacy on environmental design scholarship that explains how cultural factors play a significant role in the ways people create and use environments as well as the way environments in turn influence people's behavior this volume presents a hitherto not seen unique and singular work that simultaneously articulates a cohesive framework of rapoport's architectural theories and demonstrates how that theoretical approach be used in architectural inquiry education and practice across environmental scales types and cultural contexts it also acknowledges for the very first time how this theoretical legacy has pioneered the decolonizing of the eurocentric approaches to architectural inquiry and has thus privileged an inclusive cross cultural perspective that laid the groundwork to understand and analyze non western design traditions the book thus reflects a wide range of cross cultural and cross contextual range to which professor rapoport's theories apply a general notion of theoretical validity he always advocated for in his own writings the volume is a paramount source for scholars and students of architecture who are interested in understanding how culture mediates the creation use and preservation of the built environment

following upon the first two volumes in this series which dealt with a broad spectrum of topics in the environment and behavior field ranging from theoretical to applied and including disciplinary interdisciplinary and professionally oriented approaches we have chosen to devote subsequent volumes to more specifically defined topics thus volume three dealt with children and the environment seen from the combined perspective of researchers in environmental and developmental psychology the present volume has a similarly topical coverage dealing with the complex set of relationships between culture and the physical environment it is broad and necessarily eclectic with respect to content theory methodology and epistemological stance and the contributors to it represent a wide variety of fields and disciplines including psychology geography anthropology economics and environmental design we were fortunate to enlist the collaboration of amos rapoport in the organization and editing of this volume as he brings to this task a particularly pertinent perspective that combines anthropology and architecture volume five of the series presently in preparation will cover the subject of behavioral science aspects of transportation irwin altman joachim f Wohlwill ix contents introduction 1 chapter 1 cross cultural aspects of environmental design amos rapoport introduction 7 culture 9 environmental design 10 the relationship of culture and environmental design 15 the variability of culture environment relations 19 culture specific environments 26 designing for culture 30 implications for the future 39 references 42 chapter 2 cross cultural research methods strategies problems applications richard w

you can use this book to design a house for yourself with your family you can use it to work with your neighbors to improve your town and neighborhood you can use it to design an office or a workshop or a public building and you can use it to guide you in the actual process of construction after a ten year silence christopher alexander and his colleagues at the center for

environmental structure are now publishing a major statement in the form of three books which will in their words lay the basis for an entirely new approach to architecture building and planning which will we hope replace existing ideas and practices entirely the three books are the timeless way of building the oregon experiment and this book a pattern language at the core of these books is the idea that people should design for themselves their own houses streets and communities this idea may be radical it implies a radical transformation of the architectural profession but it comes simply from the observation that most of the wonderful places of the world were not made by architects but by the people at the core of the books too is the point that in designing their environments people always rely on certain languages which like the languages we speak allow them to articulate and communicate an infinite variety of designs within a forma system which gives them coherence this book provides a language of this kind it will enable a person to make a design for almost any kind of building or any part of the built environment patterns the units of this language are answers to design problems how high should a window sill be how many stories should a building have how much space in a neighborhood should be devoted to grass and trees more than 250 of the patterns in this pattern language are given each consists of a problem statement a discussion of the problem with an illustration and a solution as the authors say in their introduction many of the patterns are archetypal so deeply rooted in the nature of things that it seems likely that they will be a part of human nature and human action as much in five hundred years as they are today

this book originates in two symposia held during 1985 at the annual meetings of the society for applied anthropology and the environmental design research association
