in comparative syntax a general approach has been pursued over the past decade predicated on the notion that universal grammar allows of open parameters and that part of the job of linguistic theory is to specify what values these parameters may have and how they may be set given primary linguistic data to determine the grammars of particular languages the papers presented in this volume are also concerned with language variation understood in this way their goals however do not strictly fall under the rubric of comparative syntax but form part of what is more properly thought of as a comparative semantics semantics in its broadest sense is concerned with how linguistic structures are associated with their truth conditions a comparative semantics therefore is concerned with whether this association can vary from language to language and if so what is the cause of this variation taking comparative semantics in this way places certain inherent limitations on the search for the sources of variability this is because the semantic notion of truth is universal and does not vary from language to language sentences either do or do not accurately characterize what they purport to describe the source of semantic variability therefore must be somehow located in the way a language is structured

each volume of this series contains all the important decisions and orders issued by the national labor relations board during a specified time period the entries for each case list the decision order statement of the case findings of fact conclusions of law and remedy
